

Comments on Madoka's assignment from Cindy.

Three good things

1. The code is very well structured. There are different files for different functions, and everything collaborates very well with others.
2. All code is programmed in a very professional way. You also used lot of 'async' functions to optimize the performance of the project.
3. The layout looks great, that looks like a real online shop, very professional! It's also very good you used bodyParser and cors in your code. In the meantime, you did some CSS setting in JS, that is very good.

One thing to improve

1. You can try to use 'createElement', 'setAttribute' and 'appEnd' functions instead of 'innerHTML += div ...' in 'displayProducts' and 'displayCartProduct'.
